«Stay Home Learn TEI Publisher From Scratch»

Wolfgang Meier

What is TEI Publisher?

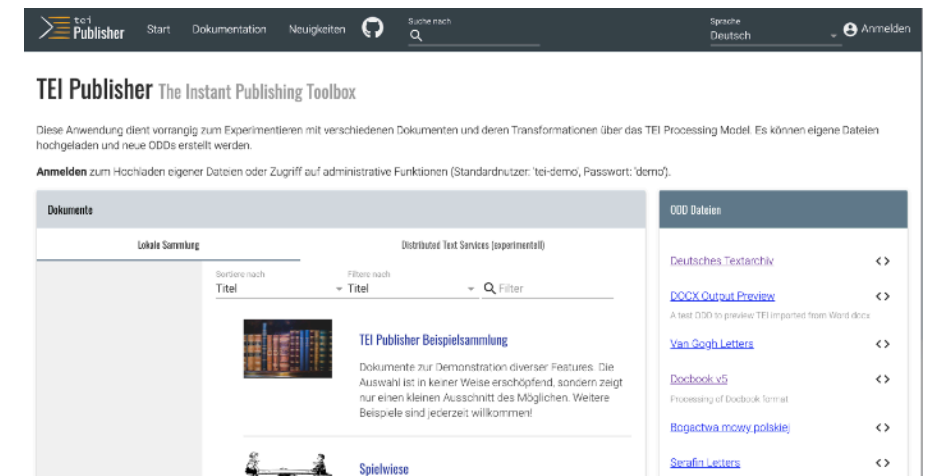

- a standard-based toolbox designed for reusability and sustainability
- providing reusable building blocks for creating a digital edition

TEI Publisher App

TEI Publisher App

- learn and play around with different ODDs, source documents and layouts
- generate a standalone custom edition once you feel confident

Implements TEI Processing Model

User Interface Components

HTML5 Web Components: basic
building blocks for page templates

The core of TEI Publisher:

TEI Processing Model

Media-independent description of
transformation rules in TEI

```
<elementSpec ident="name" mode="change">
  <model predicate="@type='place'" behaviour="inline">
    <outputRendition>
      font-variant: small-caps;
    </outputRendition>
  </model>
  <model behaviour="inline">
    <outputRendition>
      color: #CC6600;
    </outputRendition>
  </model>
</elementSpec>
```

TEI Processing Model

- Officially added to the TEI Guidelines in 2016
- Much more sustainable and usually faster than hand-written transformations
- Powers all text transformations in TEI Publisher

TEI PM used for different parts of a page

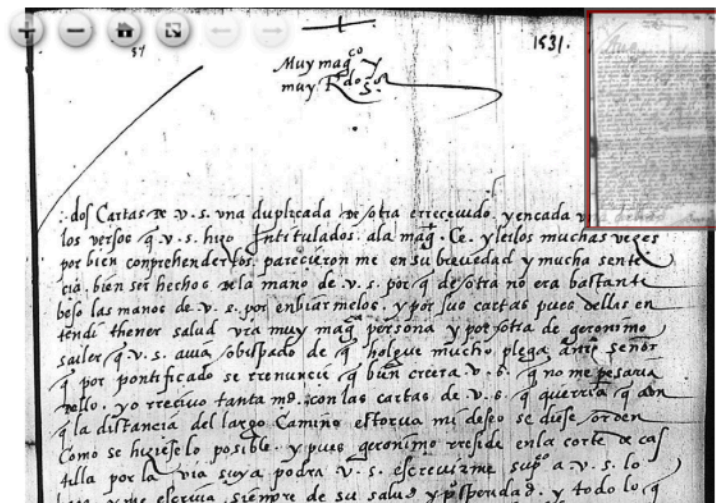

HTML Template

Document Title

Hernán CORTÉS to Ioannes DANTISCUS, Mexico 1531-08-01

Dos Cartas De Vuestra Señoría, una duplicada de otra,^{BCz, 1596, p} he receuido, y en cada una dellas los versos que Vuestra Señoría hizo intitulados a la **magestad cesárea**, y leílos muchas vezes por bien comprehenderlos. Parecióronme en su brevedad y mucha sentencia bien ser hechos de la mano de Vuestra Señoría, porque de otra no era bastante. Beso las manos de Vuestra Señoría por enbiarmelos y por sus cartas, pues dellas entendí tener salud Vuestra Magnífica Persona, y por otra de **Gerónimo Sailer** que Vuestra Señoría había obispado, de que holgue mucho; plega a Nuestro Señor que por pontificado se rrenuncie que bien creará Vuestra Señoría que no me pesaría dello.

Otrzymałem od Waszej Wielmożności dwa listy, jeden jest kopią drugiego, a w każdym z nich wiersze, które Wasza Wielmożność napisała, zadedykowane **Cesarzowi**. Czytałem je wielokrotnie, aby je dobrze zrozumieć. Ich zwięzłość i głębokie znaczenie poświadczają, że są dziełem Waszej Wielmożności, ponieważ kto inny by tak nie potrafił. Całuję ręce Waszej Wielmożności za posłanie mi ich i za Jej listy, z których dowiedziałem się, że Wasza Dostojność ma się zdrowo, a z innego listu, od **Hieronima Sailera**, że Wasza Wielmożność otrzymała biskupstwo, z czego bardzo się cieszę. Błagaj Pana Boga, żeby cię uchronił przed godnością papieską — co Waszej Wielmożności łatwo może przyjść na myśl — żebym potem tego nie żałował.

Core of the Processing Model: ODD

- ODD = One Document Does it all
- simple, standardized syntax, which can still be understood in 20 years
- literate programming: embedded documentation in TEI

Sustainable

Output ▾

Description [Document the model]

Predicate 1 [Eine Bedingung angeben (in XQuery)]

behaviour inline or [Custom Behaviour]

CSS Class [Define CSS class name (for external CSS)]

Template 1 [Code Vorlage für den Inhalt angeben]

Parameters +

Renditions +

Scope ▾

1 color: #CC6600;

🗑️

☐ Use source rendition

Name of the element processed by this spec

The behaviour to apply

Styling instructions

What to style via outputRendition

- Limit to editorial aspects expressing specific features of the text
- Overall appearance should be determined by external theme
- Avoid e.g. setting font-family or fixed font-size: those should adjust to the general web design
- You can assign a CSS class to be used by external stylesheets via attribute `cssClass`

Multiple models

The predicate (= condition) to be met for this model to be applied

```
<elementSpec ident="name" mode="change">
  <model predicate="@type='place'" behaviour="inline">
    <outputRendition>
      font-variant: small-caps;
    </outputRendition>
  </model>
  <model behaviour="inline">
    <outputRendition>
      color: #CC6600;
    </outputRendition>
  </model>
</elementSpec>
```

Second (fallback) model

Multiple models: rules

- The first model with a matching or no predicate will be applied
- Attention: models below will be ignored - even if they would match

Passing Parameters

Name of the parameter

```
<elementSpec ident="date" mode="change">
  <model output="web" predicate="@when" behaviour="alternate">
    <param name="default" value="."/>
    <param name="alternate" value="format-date(@when, '[FNn]', [D1o] [MNn], [Y]')"/>
  </model>
  <model predicate="text()" behaviour="inline"/>
</elementSpec>
```

Parameter value
(valid XPath expression!)

Parameters

- All behaviours take at least one implicit parameter: **content**, corresponding to the content to be processed
- if **content** is not specified, it will be set to the current node
- Some behaviours need additional parameters, e.g.
 - link: **uri**
 - alternate: **default** and **alternate**
- See [behaviour list](#) in TEI Publisher

modelSequence

Has two or more models; all matching models are applied in sequence

A modelSequence may itself have a predicate condition

```
<elementSpec ident="title" mode="change">
  <modelSequence predicate="parent::titleStmt/parent::fileDesc">
    <model predicate="preceding-sibling::title" behaviour="text">
      <param name="content" value="' - '"/>
    </model>
    <model behaviour="inline"/>
  </modelSequence>
</elementSpec>
```

Nested models may still use a predicate to limit their application
